

PLASTIC PIPE CLIP FOR PLASTIC PIPES

Plastic pipe clip for plastic pipes

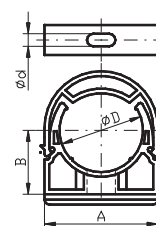

The pipe clip is designed for the fixing of pipes with smaller load.

Plastic double pipe clip for plastic pipes

The pipe clip is designed for the fixing of pipes with smaller load.

Plastic pipe clip with stirrup for plastic pipes

The pipe clip is designed for the fixing of pipes on which bigger load is put, therefore, it is covered by a stirrup. The stirrups ensure the increase of guaranteed load and protect the pipes against their protrusion out of the clips. As well as the previous types, individual clips can be connected.

These pipe clips serve for the fixing of plastic pipes of full diameters of 8.5 mm to 110 mm on underlay masonry, concrete panels and other sheeting material and enable sliding movement of the pipes caused by heat dilatation. Stirrups used with some clip diameters ensure the increase of guaranteed load and prevent the pipe protrusion out of the clip. Single clips can be mutually connected.

Mounting procedure:

PLASTIC PIPE CLIP FOR COPPER PIPES

Plastic pipe clip for copper pipes

The pipe clip is made in a diameter as from 10 to 22 mm.

The clips serve for the fixing of copper pipes of a full diameter of 10 to 35 mm on underlay masonry, concrete panels and other sheeting material and enable sliding movement of the pipes caused by heat dilatation. Individual clips can be mutually connected.

We recommend using a **hammer-in shoulder** for the assembly (page 60).
